Acknowledgement

I am profoundly touched by the blessings bestowed upon me for which I am eternally grateful and in debt. "There is no good in life except gaining knowledge."

In realization of this work I would like to thank my supervisor Prof. T. Arafat for his direct and indirect support and assistance throughout my master degree without which I would not have completed my work in the planned framework. I extend my thanks to Prof. T. Alhussainy who co-supervised this work and lend great support in reading and directing my thesis. Further, I would like to thank Prof. N. Idkaidek for the assistance he has given me in the statistical analysis used in this work. Also, I would like to thank Hamza and Munther from Jordan Center for Pharmaceutical Research (JCPR) for their practical assistance.

I am deeply grateful to Science-forum for Research and Consultancies (SIPS) for the constant support and encouragement especially Dr. Mohammed Saleem who is my mentor and idol. Also, to my colleagues for their prayers and motivation.

At last but not least, for TRB Chemedica of Switzerland for allowing me the benefit of knowledge into diacerein and the material support provided.
