

	normalized concentration derived from standard calibration curves	
34.	Linearity and linear working range of six standard curves of candesartan data based on the calculated area ratio	88
35.	Raw data of six standard curves with regards to correlation, slope, $R^2$ , and intercept for candesartan	88
36.	Candesartan QC low Samples stability autosampler procedure at 4°C	89
37.	Candesartan QC high Samples stability autosampler procedure at 4°C	90
38.	Calibration curve for QC samples showing Candesartan stability autosampler procedure at 4°C	90
39.	Raw data of six standard curves with regards to correlation, slope, $R^2$ , and intercept for candesartan	90
40.	Candesartan QC low Samples stability after preparation at room temperature	91
41.	Candesartan QC high Samples stability after preparation at room temperature	92
42.	Calibration curve for QC samples showing bench stability for candesartan	92
43.	Raw data of six standard curves with regards to correlation, slope, $R^2$ , and intercept for candesartan	92
44.	The accuracy of three standard curves of candesartan showing freeze thaw stability of QC low	93
45.	The accuracy of three standard curves of candesartan showing freeze thaw stability of QC high	94
46.	Calibration curve for QC samples showing freeze and thaw stability for candesartan	94
47.	Raw data of six standard curves with regards to correlation, slope, $R^2$ , and intercept for candesartan	94
48.	Pharmacokinetic data of candesartan	97
49.	Comparing the mean serum candesartan drug concentration at selected time intervals after administration between single and combined drug use	100
