

## List of figures

Figure legends	Page No.
<b>Figure 1.1</b> Illustration of the pharmacokinetic processes (ADME).	2
<b>Figure 1.2</b> Division of enzymes into phase I and phase II, Phase I enzymes are normally oxidative and phase II conjugative.	10
<b>Figure 1.3</b> Propranolol chemical structure.	15
<b>Figure 1.4</b> Propranolol major metabolic pathways	22
<b>Figure 1.5</b> Chemical structure of glucosamine	25
<b>Figure 1.6</b> Hexosamine biosynthetic pathway.	29
<b>Figure 2.1</b> Anesthesia system linked to an oxygen concentrator and a peristaltic perfusion pump.	55
<b>Figure 3.1</b> Intra-day one calibration curve of propranolol in Krebs buffer.	76
<b>Figure 3.2</b> Intra-day two calibration curve of propranolol in Krebs buffer.	77
<b>Figure 3.3</b> Intra-day three calibration curve of propranolol in Krebs buffer.	78
<b>Figure 3.4</b> Freeze-thaw stability test calibration curve of propranolol in Krebs buffer.	79
<b>Figure 3.5</b> Bench-top stability test calibration curve of propranolol in Krebs buffer.	80
<b>Figure 3.6</b> Autosampler stability test calibration curve of propranolol in Krebs buffer.	81
<b>Figure 3.7</b> Propranolol concentrations versus mean area ratios for each concentration of standard points.	83
<b>Figure 3.8</b> Intra-day one calibration curve of propranolol in serum.	99
<b>Figure 3.9</b> Intra-day two calibration curve of propranolol in serum.	100
<b>Figure 3.10</b> Intra-day three calibration curve of propranolol in serum.	101
<b>Figure 3.11</b> Freeze-thaw stability test calibration curve of propranolol in serum.	102
