

<b>Table 3.36</b> Calibration curve data of intra-day one of validation.	99
<b>Table 3.37</b> Calibration curve data of intra-day two of validation.	100
<b>Table 3.38</b> Calibration curve data of intra-day three of validation.	101
<b>Table 3.39</b> Calibration curve data of freeze-thaw test of stability.	102
<b>Table 3.40</b> Calibration curve data of bench-top test of stability.	103
<b>Table 3.41</b> Calibration curve data of autosampler test of stability.	104
<b>Table 3.42</b> Calculated Accuracy % based on measured concentration mean for each concentration of standard points.	105
<b>Table 3.43</b> Calculated Accuracy % based on area ratios mean for each concentration of standard points.	105
<b>Table 3.44</b> CV% values of AUC mean of propranolol and sildenafil (internal standard) in mobile phase.	107
<b>Table 3.45</b> CV% values of AUC mean of propranolol and sildenafil (internal standard) in serum blood.	108
<b>Table 3.46</b> Absolute recovery ratios of propranolol in serum.	108
<b>Table 3.47</b> Absolute recovery ratios of sildenafil citrate (internal standard) in serum.	109
<b>Table 3.48</b> Glucosamine effect on propranolol AUC, $C_{max}$ , and other pharmacokinetic parameters after an oral dose of 20 mg/kg PRN, PRN with GlcN 100 or PRN with GlcN 200 mg/kg in rats. The data are presented as mean $\pm$ SEM (n=7).	114
<b>Table 3.49</b> Cimetidine and rifampin effect on propranolol AUC, $C_{max}$ , and other pharmacokinetic parameters after an oral dose of 20 mg/kg of propranolol, propranolol with 5 and 9 mg/kg of cimetidine and rifampin, respectively in rats. The data are presented as mean $\pm$ SEM (n=5).	114
<b>Table 3.50</b> $P_{eff}$ , Clearance, and $V_d$ results of propranolol 20 mg/kg, propranolol with 100 and 200 mg/kg GlcN estimated by the Nelder–Mead algorithm using the SimCYP program.	115
