

- Wet exposure condition for timber members 31
- Wet exposure geometrical modification factor for timber 30, 31
- Wet exposure stress modification factor for timber 30, 31
- Wind loading 6
- Wire butterfly ties 136
- Yield strength of steel reinforcement 73
- Young's modulus of elasticity 16

Structural Elements Design Manual is the structural engineer's 'companion volume' to the latest editions of the four British Standards on the structural use of timber, concrete, masonry and steelwork.

For the student at higher technician or first degree level it provides a single source of information on the behaviour and practical design of the main elements of the building structure.

With plenty of worked examples and diagrams, it is a useful textbook not only for students of structural and civil engineering, but also for those on courses in related subjects such as architecture, building and surveying whose studies include the design of structural elements.

Trevor Draycott is Assistant Project Services Manager with Lancashire County Council's Department of Property Services and for many years has been part-time lecturer in structures at Lancashire Polytechnic.

'Students will find this an essential support text to the Codes of Practice in their study of element sizing.'

The Structural Engineer

'Provides simple theory combined with practical design, backed up with a good selection of worked examples . . . a welcome addition to the recommended reading list.'
