

Direct-indirect luminaires suspended above the table provide ambient lighting in line with the layout or the office furniture. Downlights arranged along the side walls brighten the overall environment. The end walls can receive additional lighting via wallwashers; luminaires along the side walls can be dimmed to provide lower lighting levels, for example, for people to write by when slides are being shown.

Recessed downlight for halogen lamps or general service lamps.

Pendant direct-indirect luminaire for fluorescent lamps.

Recessed wallwasher for fluorescent lamps.

The lighting is installed in a suspended ceiling positioned at a set distance to the walls. The light consists of two rows of low-voltage downlights, which produce specular effects on the surface of the table. These downlights comprise the main lighting on representative occasions or light for people to write by in the case of slide projections. Above the edge of the ceiling there are tracks with washlights for indirect lighting, and spotlights. The spotlights and the washlights, which have fluorescent lamps, adjacent to the side and end walls can be switched and dimmed separately.

Recessed downlights for low-voltage lamps.

Track with spotlights and wallwashers for fluorescent lamps.

Washlights provide direct lighting over the table and ambient lighting by the light reflected by the walls. The luminaires are equipped with general service lamps, which means that they can be easily dimmed to the required lighting level; the alignment of the lighting to the seating ensures optimum visual comfort. The pairs of luminaires nearest the end walls can be switched separately for projection lighting. Tracks mounted parallel to the end walls can take spotlights for the illumination of the walls or presentations.

Downlight for general service lamps.
