

4.13 Multifunctional spaces

Multifunctional spaces are used as meeting rooms for a variety of events. They can be found in hotels and congress centres, in public buildings and on industrial premises. They are most frequently used for conferences and seminars, but also for receptions and parties. A multifunctional space can often be divided by means of a removable partition, which allows a number of small meetings or events to take place simultaneously; this requires a lighting layout that is symmetrically aligned to the dividing line, in relation to both the overall space and to the potential individual spaces.

The lighting should be variable to correspond to the multifunctional nature of the space. It should be both functional and prestigious. The lighting installation will generally comprise several components, which can be switched or electronically controlled separately or in unison. Functional, efficient ambient lighting can

be provided by louvred luminaires equipped with fluorescent lamps, for example, with adjustable spotlights for the presentation of products or teaching aids and downlights for general service lamps for accent lighting or dimmed lighting. Depending on the design of the space, decorative luminaires may be used for effect.

Multifunctional spaces are used for a variety of events. The lighting in these spaces is not only expected to be functional, but also suitable for presentations and festive occasions. Rooms that can be divided require special attention when designing the lighting installation.

Seminar.

Conference.

Gala dinner with individual tables and buffet.

Gala event with cabaret and dance floor.

Simultaneous use: small party and meeting.

Two lighting layouts comprising square louvred luminaires designed for compact fluorescent lamps and downlights equipped with halogen lamps produce both efficient and accentuated, dimmable lighting.

Two runs of track mounted flush with the ceiling at both ends of the room take spotlights for lighting presentations or a stage area. The twin lighting layout allows the room to be divided and both parts used separately.

Recessed louvred luminaire for compact fluorescent lamps.

Double-focus downlight for halogen lamps.

Track with spotlights.
