

4.2.3	Bending moments and shear forces	26
4.2.3.1	General	26
4.2.3.2	One-way spanning slabs of approximately equal span	27
4.2.3.3	Two-way spanning slabs on linear supports	27
4.2.3.4	Flat slabs	28
4.2.4	Span/effective depth ratios	32
4.2.4.1	Slabs on linear supports	32
4.2.4.2	Flat slabs without drops	33
4.2.5	Section design – solid slabs	33
4.2.5.1	Bending	33
4.2.5.2	Shear	35
4.2.5.3	Openings	37
4.2.6	Section design – ribbed and coffered slabs	37
4.2.6.1	Bending	37
4.2.6.2	Span/effective depth ratios	37
4.2.6.3	Shear	37
4.2.6.4	Beam strips in ribbed and coffered slabs	38
4.2.7	Notes on the use of precast floors	38
4.3	Structural frames	38
4.3.1	Division into sub-frames	38
4.3.2	Elastic analysis	39
4.3.3	Redistribution of moments	39
4.3.4	Design shear forces	39
4.4	Beams	40
4.4.1	Introduction	40
4.4.2	Fire resistance and durability	41
4.4.2.1	Fire resistance	41
4.4.2.2	Durability	42
4.4.3	Bending moments and shear forces	42
4.4.4	Span/effective depth ratios	43
4.4.5	Section design	44
4.4.5.1	Bending	44
4.4.5.2	Minimum and maximum amounts of reinforcement	46
4.4.5.3	Shear	47
4.5	Columns	49
4.5.1	Introduction	49
4.5.2	Slenderness, fire resistance and durability	49
4.5.2.1	Slenderness	49
4.5.2.2	Fire resistance	49
4.5.2.3	Durability	50
4.5.3	Axial loads and moments	51
4.5.4	Section design	51
4.5.5	Biaxial bending	52
4.5.6	Reinforcement	53
4.6	Walls	54
4.6.1	Introduction	54
4.6.2	Slenderness, fire resistance and durability	54
4.6.2.1	Slenderness	54
4.6.2.2	Fire resistance	54
4.6.2.3	Durability	54
4.6.3	Axial loads and moments	55
4.6.3.1	In-plane bending	55
4.6.3.2	Bending at right-angles to the walls	56
4.6.4	Section design	56
4.6.4.1	Walls resisting in-plane moments and axial loads	56

4.6.4.2	Walls resisting in-plane moments, axial loads and transverse moments	56
4.6.4.3	Intersecting walls	56
4.6.5	Reinforcement	57
4.6.6	Openings in shear and core walls	57
4.7	Staircases	58
4.7.1	Introduction	58
4.7.2	Fire resistance, durability and concrete grades	59
4.7.3	Bending moments and shear forces	59
4.7.4	Effective spans	59
4.7.4.1	Stairs spanning between beams or walls	59
4.7.4.2	Stairs spanning between landing slabs	59
4.7.4.3	Stairs with open wells	59
4.7.5	Span/effective depth ratios	59
4.7.6	Section design	60
4.8	Design of non-suspended ground floor slabs	60
4.9	Guidance for the design of basement walls	60
4.9.1	General	60
4.9.2	Bending moments and shear forces	61
4.9.3	Section design	61
4.9.4	Foundation	61
4.9.5	Reinforcement	61
4.10	Foundations	61
4.10.1	Introduction	61
4.10.2	Durability and cover	62
4.10.3	Types of foundation	62
4.10.4	Plan area of foundations	62
4.10.5	Design of spread footings	63
4.10.5.1	Axially loaded unreinforced pad footings	63
4.10.5.2	Axially loaded reinforced pad footings	63
4.10.5.3	Eccentrically loaded footings	64
4.10.6	Design of other footings	64
4.10.6.1	Strip footings	64
4.10.6.2	Combined footings and balanced footings	64
4.10.7	Reinforcement	65
4.10.8	Design of rafts	65
4.10.9	Design of pile caps	65
4.10.10	Reinforcement in pile caps	66
4.11	Robustness	67
4.11.1	General	67
4.11.2	Tie forces and arrangements	67
4.12	Detailing	68
4.12.1	General	68
4.12.2	Bond and anchorage	68
4.12.3	Laps and splices	68
4.12.4	Hooks, bends and bearings	69
4.12.5	Curtailement of reinforcement	70
4.12.6	Corbels and nibs	73
